The Ecological Effects of Trait Variation in a u-Predator, v-Prey System

Sam Fleischer, Pablo Chavarria

Introduction

Motivation

Model Formulation Lotka-Volterra Schreiber, Bürger,

Our Extension

- Crab vs. gastropod
- Protist vs. bacteria
- ▶ There is trait variation within species
 - ► Thickness of plant cuticula
 - ► Strength of gastropod shell
- Incorporating trait variation provides richer dynamics than classical Lotka-Volterra models

The Ecological Effects of Trait Variation in a u-Predator, v-Prey System

Sam Fleischer, Pablo Chavarria

ntroduction

Motivation

Lotka-Volterra Schreiber, Bürger, and Bolnick

Preliminary Results

$$rac{dN}{dt} = N(b - aM)$$
 $rac{dM}{dt} = M(eaN - d)$

- ► *N* ≡ Prey Density
- $ightharpoonup M \equiv \mathsf{Predator} \; \mathsf{Density}$

Parameters

- $ightharpoonup a \equiv \mathsf{Attack} \; \mathsf{rate}$
- $ightharpoonup b \equiv Prey birth rate$
- $ightharpoonup e \equiv \text{Efficiency}$
- $ightharpoonup d \equiv \mathsf{Predator} \; \mathsf{death} \; \mathsf{rate}$
